

This creative project was shared by the National Button Society.

HUMMING BUTTON TOY

WHAT YOU NEED

- Two feet of string
- Very Large 2 or 4-holed button

Thread the string through one hole in the button, and then thread it back through another hole in the same button.

Tie the two ends of the string together, forming a loop of the string.

Slide the button into the middle of the loop, and place a finger into each end of the loop.

Swing the button around between your fingers, winding up the thread and pulling your fingers closer.

Then, pull your fingers apart and the button will spin to unwind.

You will begin to sense the rhythm that works for your button, and the toy will begin to hum for you!
